

ALIGNMENT WITH UN SDGS

Natural Resource Partners (NRP) is guided by the principles and spirit of the United Nations Sustainable Development Goals. The following goals represent areas where we believe our business has the most significant positive impact:

UN Goal #7: Affordable and Clean Energy

Our leased interests allow for the extraction of essential inputs for affordable electricity as well as opportunities for carbon neutral energy projects and carbon sequestration. In addition, our soda ash interest allows for the development of solar panels and lithium batteries for clean energy production.

UN Goal #8: Decent Work and Economic Growth

We provide competitive paying jobs, meaningful benefits, and strong opportunities for employee development. Our assets serve as critical means for the manufacturing of steel, glass, solar panels, lithium batteries, affordable electricity, clean electricity, and basic building materials to support economic growth.

UN Goal #15: Life on Land

Our active sustainable forest management practices and prudent harvesting techniques seek to protect the forests and natural environments of our landholdings.
